Easy CAM Video Sewer Inspection Camera Compatibility

Because Easy CAM is self contained the video cable on the unit connects to a host of video products – VCR's, TV's, DVR's, Laptop, and DVD recorders to name a few. You can even use two or more of these at the same time. If it has a video input jack Easy CAM's inspection camera will connect to it.

1. MONITOR CONNECTIONS

EasyCAM™ sells a Monitor and DVD combination in a heavy-duty, crush resistant carrying case. **This is the model RM.**

However, EasyCAM™ does not limit our customers to this package. Our standard connection jacks (RCA-style jacks, yellow means video) will accept industry standard yellow connections for monitors, allowing you to use monitors of your choosing. The EasyCAM™ has two (2) independent video output connectors for video display and/or recording.

2. PC CONNECTIONS

EasyCAM™ can connect to PCs using a PC accessory, **Video Grabber**. The **Video Grabber** connects the video input (RCA-style jack) to a computer's USB port. The **Video Grabber** is available at computer and electronics stores for about \$70.

3. VIDEO GOGGLES

EasyCAM™ connects to video goggles which have an RCA-style video jack. We tested and used **ezVision G1** goggles. Small and light, the video goggles can be carried anywhere, and they provide a good image even on sunny days.

4. Locating Wands

The purpose of the locator is to find the physical location of the transmitter while inside the pipe. The transmitter is molded into the camera's tail approximately 5" behind the camera lens. Once the transmitter is located with an analog or digital device, the location of the break/obstacle in the pipe can be determined. The worker knows where to dig. Easy CAM's 512HZ (a standard frequency) location transmitter can be detected by either analog or digital receivers of your choice (reading 512Hz).

- a.** The analog receiver detects the location of the signal so the plumber knows where to begin digging to make repairs.
- b.** The digital receiver detects the location and the depth of the signal, which is a big advantage for deep pipes. This eliminates the guesswork for digging deep trenches to fix damaged sewer lines, and makes repair estimates more accurate.

Easy CAM's sewer inspection camera with minimal downtime for repairs.

We took everything that operates the camera and made it part of the push rod frame, unlike most companies that put theirs in the monitor package.

We built our camera with replaceable components that the owners can install themselves. In most cases you don't have to send your camera to us, we send you the component and you can install it yourself using a few allen wrenches and a screwdriver. This results in the shortest downtime in the industry.

Full Color Video Inspection Camera. Built to Last!

Easy CAM will connect to VCR's, TV's, DVR's, Laptops, and DVD recorders to name a few. You can even use two or more of these at the same time. If it has a video input jack Easy CAM will connect to it.

Mr. Rooter of Lincoln, NE Great unit, use it every day, no problems so far.

It just makes sense.

Sewer Inspection Camera Lens Cover for Easy CAM cameras!

Our removable pipe inspection camera lens cover allows you to change the inspection camera lenses if they get cracked or scratched. The sewer camera lens cover is takes the blunt of the force and is replaceable, and is made of a lightweight composite material that creates very little friction within the pipe, even more so in cast or really rough pipe.

Video Inspection Camera Lens and cover

Our lens is made of laminated glass. The lamination will maintain the waterproof qualities of the lens even if it is cracked or broken. In the event of a crack all you will have to replace is the lens!

Sewer Inspection Camera Head is removable from the pushrod!

The pipe inspection camera head and assembly is removable, and it connects to the push rod with a submersible and completely waterproof connector.
